

A study investigating iron deficiency in pulmonary hypertension

More than 60% of patients with pulmonary hypertension suffers from **iron deficiency**

Iron deficiency leads to a **reduced quality of life** and **reduced exercise capacity**

Iron administration through an **IV** can **quickly correct** an iron deficiency

It is **not clear** yet whether an iron infusion can also **help against the symptoms**

The **IRON-PH** study investigates the impact of an **iron infusion** on the **exercise capacity** and **quality of life** in patients with pulmonary hypertension

What to expect?

- You will receive an **iron infusion** or a **placebo infusion**
- Maximum **2 administrations**
- Follow-up period of **6 months** with **2 hospital visits**
- Additional assessments: **questionnaires** and **6-minute walk test**
